

Population Change Report

Overview: The given dataset consists of population for each state per year between 2013-2019. For the presentation purpose, I selected 3 states which had changes in population from 2013 to 2019.

Finding:

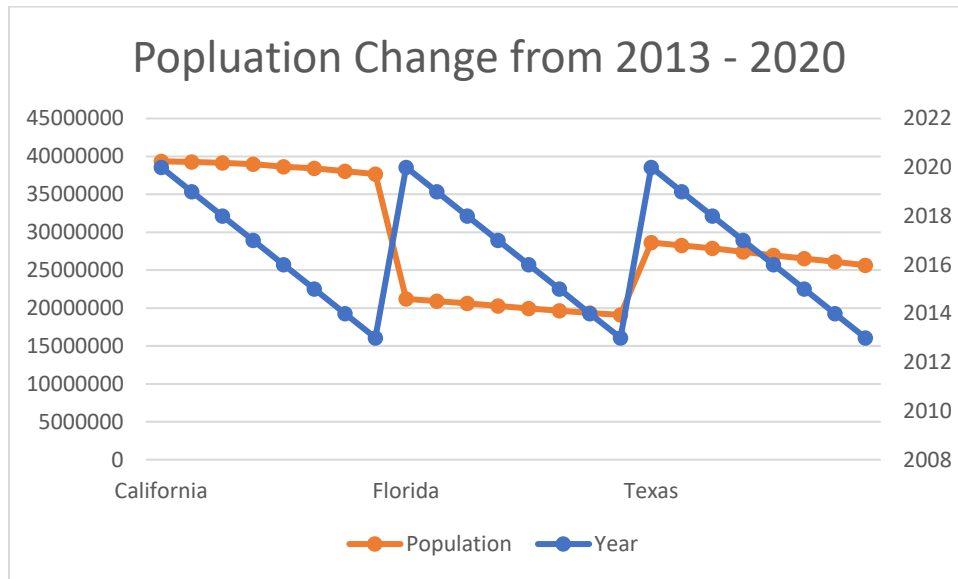

Figure 1

Based on the graph representation above in Figure 1, I would like to explain the population downfall from California in 2020 and sudden population increase to states like Florida and Texas from 2018.

Looking at this population change in California; the number of people are fleeing from California are trying to avoid paying high taxes and daily maintenance. People looking for cheaper and better-quality life in cities like Florida and Texas.
